

## CONSERVE WATER IN FARM

UNIT CODE : 0811 451 05 A

TVET CDACC UNIT CODE: AGR/OS/EXT/CR/04/4/MA

### UNIT DESCRIPTION

This unit specifies the competencies required by Agriculture and Extension practitioner to utilize water in the farm. It involves select sustainable water supply, harvest water in the farm, irrigate crop farm and continuously improve utilization of water.

### ELEMENTS AND PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
These describe the <b>key outcomes</b> which makeup <b>work place function</b> .	These are <b>assessable</b> statements which specify the required level of performance for each of the elements. <i><b>Bold and italicized terms are elaborated in the range.</b></i>
1. Select sustainable water supply	1.1 <i><b>Water sources</b></i> are identified as per work requirement. 1.2 <i><b>Water testing</b></i> is carried out as per work procedures 1.3 Water treatment is as carried out as per work procedure.
2. Harvest water in the farm	2.1 <i><b>Water harvesting structure</b></i> identification is carried out as per work requirement 2.2 water harvesting structure design is drawn as per work requirement 2.3 <i><b>Personal Protective Equipment</b></i> is worn as per work requirement 2.4 Water harvesting structure is constructed as per design 2.5 water harvesting structure functionality is tested as per work requirement 2.6 water harvesting structure faults are corrected as per work requirement 2.7 Water harvesting structure is utilized as per work

	requirement
3. Irrigate crop farm	<p>3.1 crop water requirement grown is established as per work requirement</p> <p>3.2 <b>Irrigation system</b> is selected as per work requirement</p> <p>3.3 Irrigation system is designed as per work requirement</p> <p>3.4 <b>Tools and equipment</b> are assembled and are used as per work.</p> <p>3.5 Irrigation system is installed as per work requirement</p> <p>3.6 Irrigation system is maintained as per work requirement</p>
4. Continuously improve utilization of water	<p>4.1 Repairs of faults are carried out as per work requirement</p> <p>4.2 <b>Erosion and pollution control measures</b> are put in place as per work requirement.</p> <p>4.3 Regulations governing water use and management are complied with as per work requirement.</p> <p>4.4 Improved technologies that use less water are adopted in the farm as per work requirement</p>

## RANGE

This section provides work environments and conditions to which the performance criteria apply. It allows for different work environment and situations that will affect performance.

Variable	Range
1. Water sources include but not limited to:	<ul style="list-style-type: none"> <li>• Wells</li> <li>• Rainfall</li> <li>• Rivers</li> <li>• Boreholes</li> </ul>
2. Water testing include but not limited to:	<ul style="list-style-type: none"> <li>• Mineral tests</li> <li>• PH test</li> </ul>

	<ul style="list-style-type: none"> <li>• Basic water test</li> </ul>
3. Water harvesting structures include but not limited to:	<ul style="list-style-type: none"> <li>• Farm ponds</li> <li>• Percolation tanks</li> <li>• Roof water harvesting tank</li> <li>• Wells</li> <li>• Sub surface dams</li> <li>• Field bunds</li> </ul>
4. Personal protective equipment include but not limited to:	<ul style="list-style-type: none"> <li>• Overall</li> <li>• Gum boots</li> <li>• Gloves goggles</li> <li>• Hard hats</li> </ul>
5. Tools and equipment include but not limited to:	<ul style="list-style-type: none"> <li>• Tools for designing</li> <li>• Tools and equipment for construction</li> <li>• Tools and equipment for repair and maintenance</li> </ul>
6. Components of irrigation system include but not limited to:	<ul style="list-style-type: none"> <li>• Pipes</li> <li>• Emitters</li> <li>• Pump</li> <li>• Tanks</li> <li>• Nozzles</li> <li>• Valves</li> <li>• Control unit</li> <li>• Electricity</li> </ul>
7. Erosion and pollution control measures Include but not limited to:	<ul style="list-style-type: none"> <li>• Walk-over techniques</li> <li>• Minimal disturbance techniques</li> <li>• Crown and cross fall drainage</li> <li>• Cross bank drainage</li> <li>• Relief culverts on roads</li> <li>• Mitre and table drain on roads</li> </ul>

	<ul style="list-style-type: none"> <li>• Armouring/gravelling of roads</li> <li>• Crossing and draining surfaces</li> <li>• Batter stabilisation</li> <li>• Contour banks and channels</li> <li>• Gabions</li> <li>• Sediment basins</li> <li>• Riparian buffer zones</li> <li>• Outlet protection structures</li> <li>• Re-vegetation</li> </ul>
--	---

## REQUIRED KNOWLEDGE AND SKILLS

### Required skills

The individual needs to demonstrate the following skills:

- **Literacy skills to:** Locate, read, interpret and convey information in written, diagrammatic and/or verbal form
- **Numeracy skills to** measure calculate and estimate material quantities and time required to complete a task
- **Problem-solving skills to:** Identify problems and equipment faults and demonstrate appropriate response procedures.

### Required knowledge

The individual needs to demonstrate knowledge of:

- Environmental protection requirements, including the safe disposal of products and waste material
- Organizational and site standards, requirements, policies and procedures relevant to environmental care
- Environmental policies and practices, risks and hazard identification relevant to water protection
- Established communication channels and protocols

- Problem identification and common faults-finding techniques
- Types of tools and equipment and procedures for their safe use and maintenance
- Mathematical procedures for measuring and estimating, including calculating quantities and time to complete tasks

## EVIDENCE GUIDE

This provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge and range.

1. Critical Aspects of Competency	<p>Assessment requires evidence that the candidate:</p> <ul style="list-style-type: none"> <li>1.1 Selected sustainable water supply technologies for the farm</li> <li>1.2 Designed water harvesting and storage structures</li> <li>1.3 Supervised construction of water harvesting and storage structure.</li> <li>1.4 Designed an irrigation system</li> <li>1.5 Maintained irrigation system</li> <li>1.6 Used tools and equipment appropriately</li> <li>1.7 Drew designs appropriately</li> <li>1.8 Calculated elevations correctly</li> <li>1.9 Measured distances correctly.</li> <li>1.10 Observed environmental and economic implications in designing</li> </ul>
2. Resource Implications	<p>The following resources should be provided:</p> <ul style="list-style-type: none"> <li>2.1 Appropriately simulated environment where assessment can take place</li> <li>2.2 Access to relevant workplace assessment environment</li> <li>2.3 Resources relevant to the proposed assessment activity or</li> </ul>

	tasks
3. Methods of Assessment	Competency may be assessed through: 3.1 Practical assessment 3.2 Project 3.3 Portfolio of evidence 3.4 Third party report 3.5 Written assessment 3.6 Oral assessment
4. Context of Assessment	This competency may be assessed in a workplace or in a simulated workplace
5. Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job roles is recommended. Attitude is assessed alongside application of water smart technologies.
